Next Steps

The Problem

The great potential of agricultural productivity in Kenya is hindered by the lack of modern and efficient agricultural systems and limited access to mechanization.

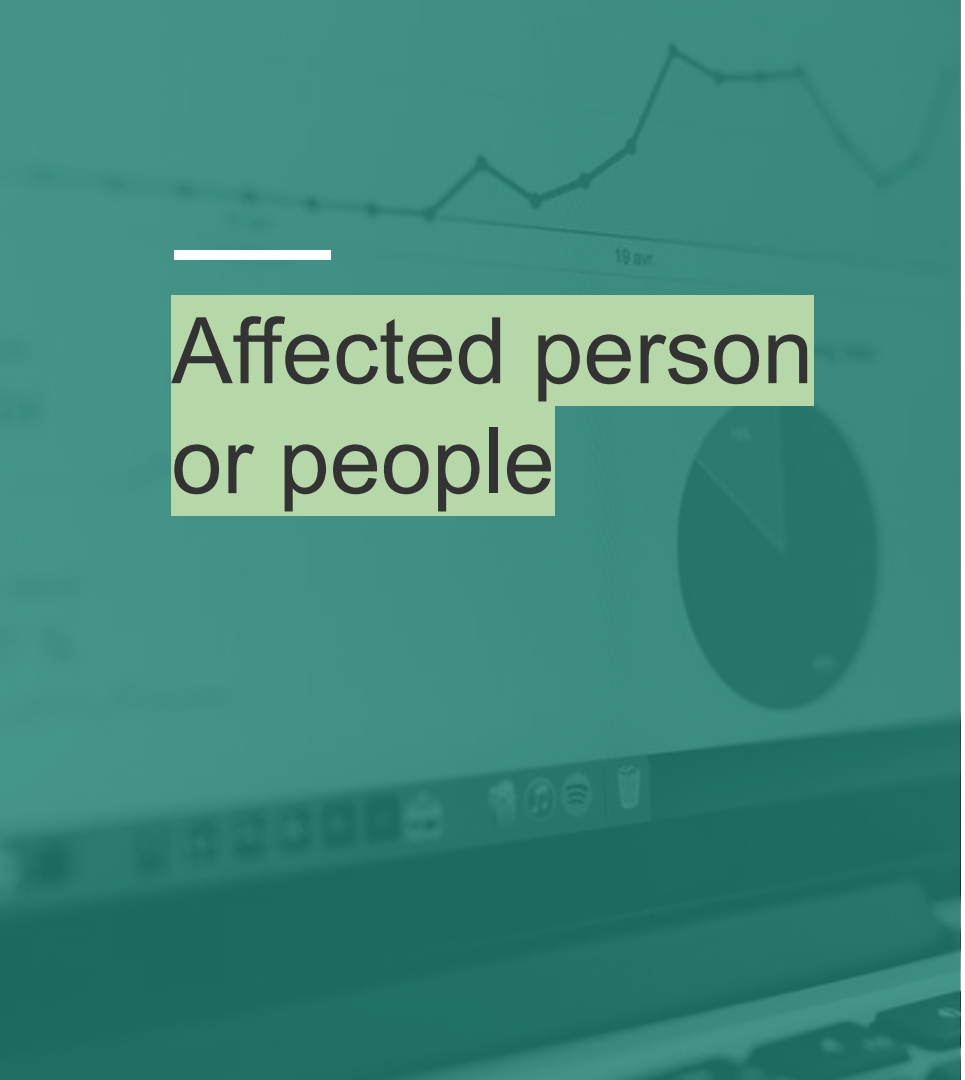

GCGO :Agriculture

Problem statement

WHY the problem matters.

The inefficiency in agrisystems contributes to seasonal food shortages, which, if not urgently addressed, will result in high mortality rates, increased unemployment, social crimes, low living standards, and stunted economic growth. This issue is a major concern as it affects food security and health, decreases farmers' incomes, exacerbates unemployment and social crime rates, and increases dependence on food importation, negatively impacting the country's GDP.

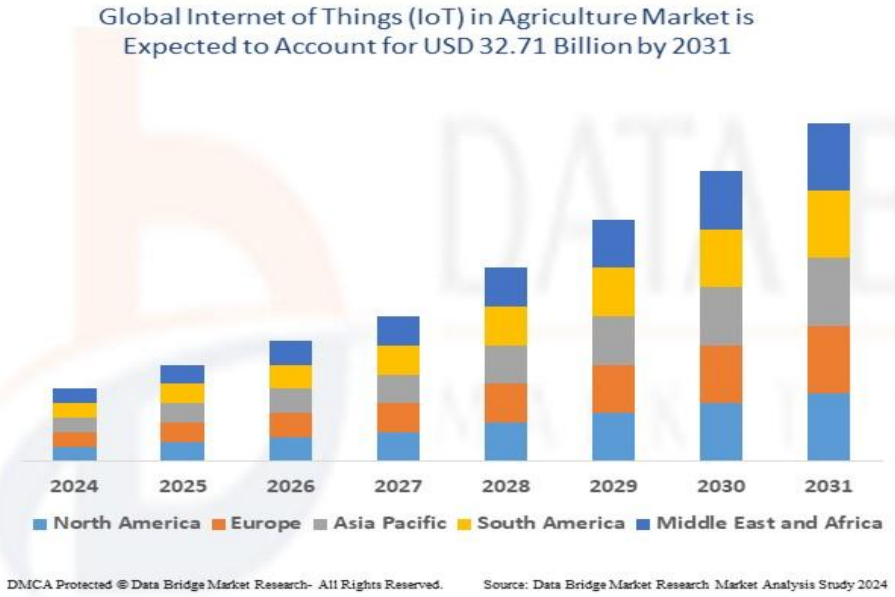

Affected person or people

All farmers especially small scale farmers are affected by the problem.

Factual information.

Lack of knowledge and Training inadequacy such as limited extension services and lack of awareness to technologies . Poor rural infrastructure and support services such limited access to machinery and repairs.

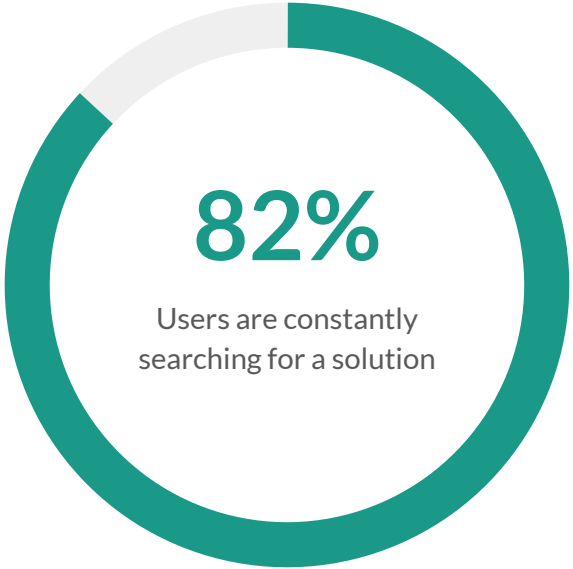

InternetofThings IoT in AgricultureMarket

Supporting information

02

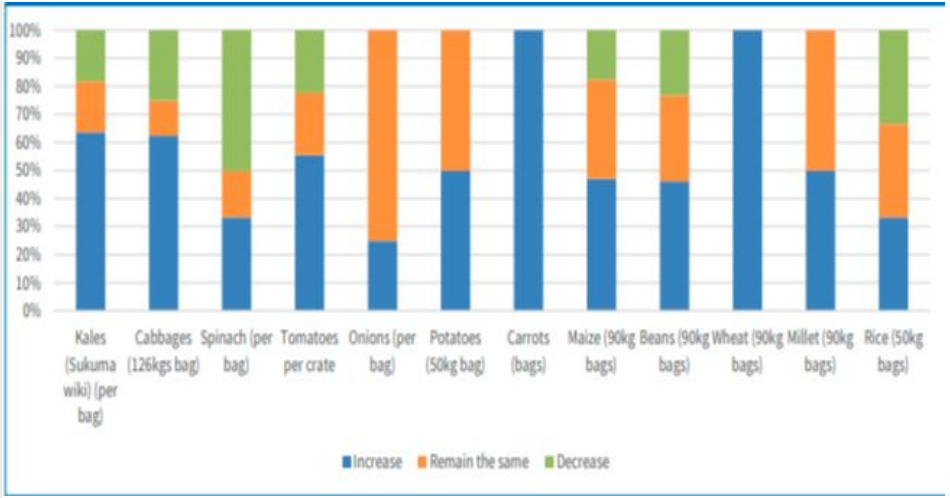

Environmental and contextual challenges such as climatic change, soil degradation and land segregation as well as pest and disease management.

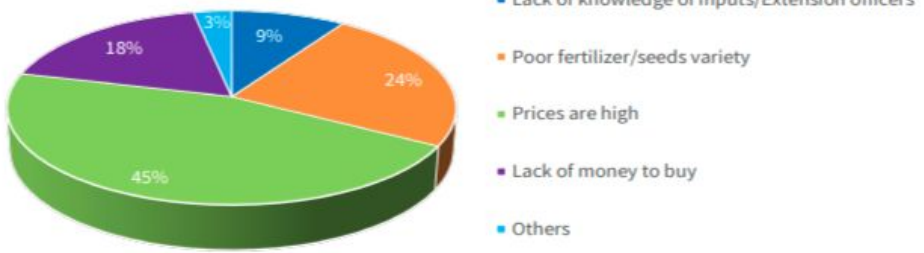

The Effects.

Food shortages, which, if not urgently addressed, will result in high mortality rates, increased unemployment, social crimes, low living standards, and stunted economic growth. This issue is a major concern as it affects food security and health, decreases farmers' incomes, exacerbates unemployment and social crime rates, and increases dependence on food importation, negatively impacting the country's GDP.

Market supply expectation.

Pain points and frustrations

1. Lack of finances to access and implement modern farming systems and high quality seeds. It includes high initial costs and economic uncertainty.
2. Knowledge and Training inadequacy such as limited extension services and lack of awareness to technologies .
3. Poor rural infrastructure and support services such limited access to machinery and repairs.
4. Environmental and contextual challenges such as climatic change, soil degradation and land segregation as well as pest and disease management .
5. Other factors included social dynamics, gender issues and integrated solutions.

Assumptions

By integrating various data sources, the app provides comprehensive analytics and insights, enabling farmers to make data-driven decisions that enhance productivity and sustainability, it also provides information on market prices and trends, helping farmers to sell their produce at the best possible prices.

Solution Proposal

A SMART AGRISYSTEM APP

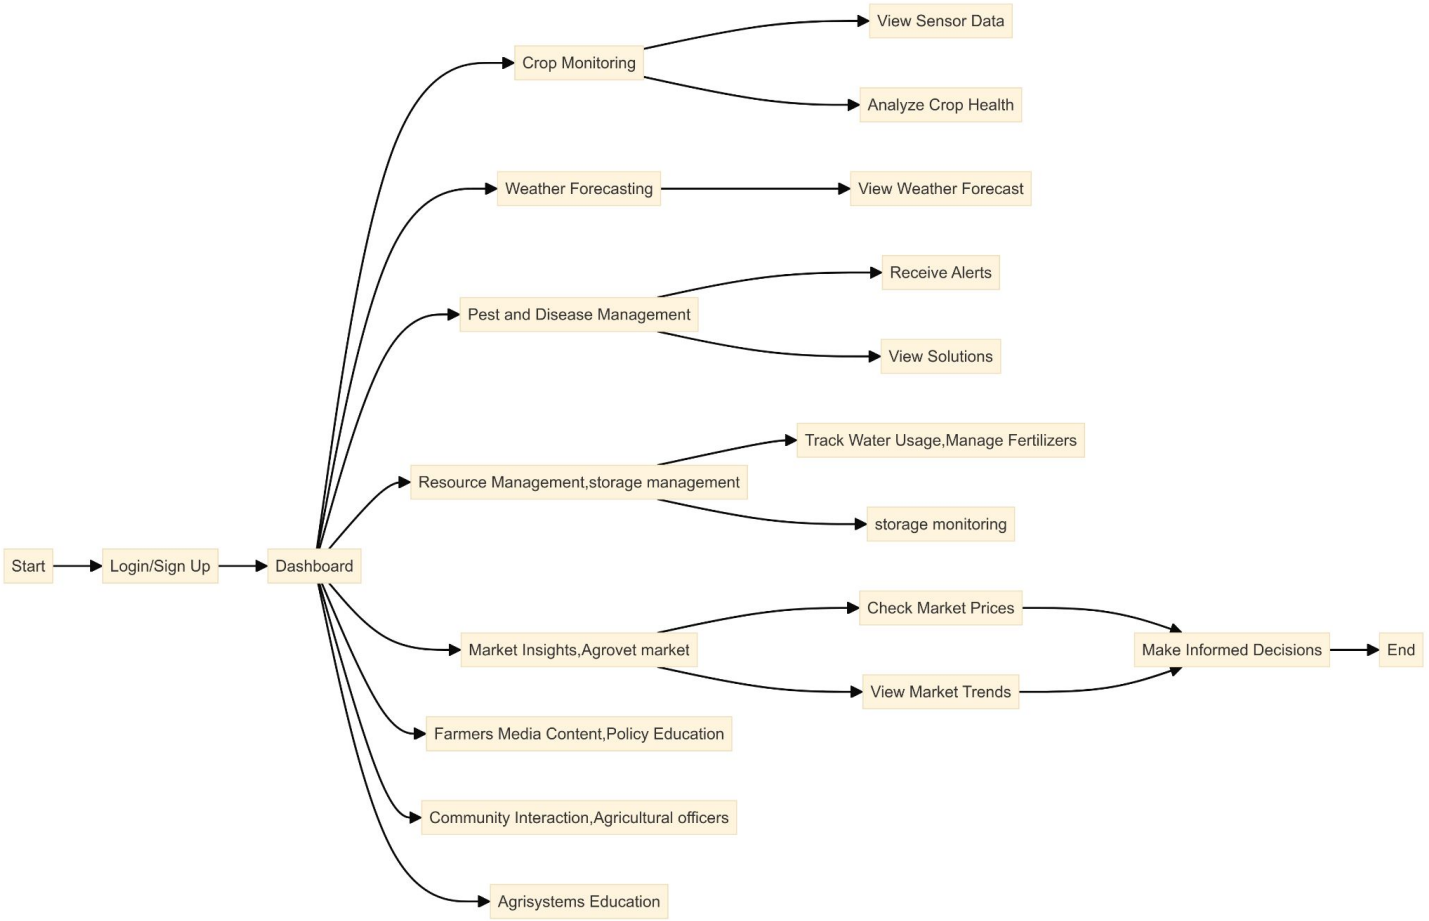

Solution description

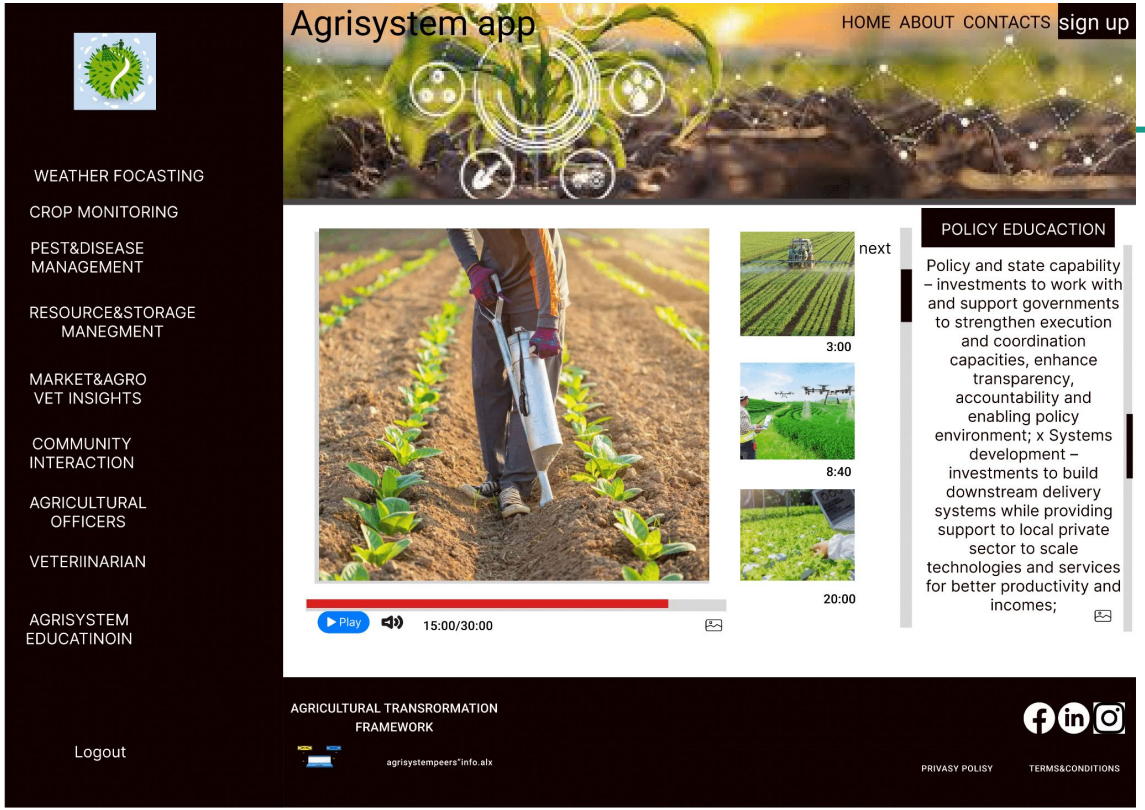

Now that you've justified your attention to the problem, summarize your solution in one or two sentences.

Why it’s better than existing solutions

Return to the problem now that you’ve introduced your solution. Compare your solution to others and describe how it is superior.

Why and importance

The AGRISYSTEM app helps track water usage and manage fertilizers, ensuring that resources are used efficiently and sustainably. It also offers alerts and solutions for pest and disease control, enabling farmers to take timely action to protect their crops hence good farm yields. The app includes farming media content and online data, providing farmers with educational resources and the latest industry news. By addressing these challenges, the AGRISYSTEM app helps farmers optimize their operations, increase productivity, and ensure sustainable farming practices. The app also provides a platform where farmers can debate and come up with policies. Also farmers will be educated in agricultural policies which enhances the fulfillment of policies. Farmers get to interact with agricultural officers,buyers,and agrovets on the platform in a convenient way.
